

Payroll and HR Technology for Burger King® Franchise Owners

Burger King understands that having it your way is just as important when looking for a payroll and HR company as it is to serving its customers.

In 2014, a Beaverton, Ore.– based licensed franchise of Burger King with 65 business entities and more than 2,187 employees, switched to Paycom's online human capital management technology. After comparing several solutions, it knew that Paycom was what it was looking for, because of the fully automated platform for HR and payroll, the cost of the service and the customer support that's offered. "The transition to Paycom exceeded my expectations. We were able to smoothly move more than 3,200 W2 employees in less than 30 days. The level of customer service we experienced during the transition and now is incomparable to anywhere else," said Selina C., HR manager. Paycom's capabilities not only eliminated reporting errors, but enabled it to access the database from any location, which was a service its previous provider didn't offer. Another added benefit to the franchise has been having access to tools that allow it to maintain up-to-date and accurate benefit reporting and benefits eligibility information resulting in a reduction in its medical insurance cost. "Switching to Paycom saved us several thousands in medical invoices because we are no longer paying for benefits based off inaccurate data," said Selina. With Paycom's single-database solution, it was able to streamline its payroll and HR processes and gain easy, accurate access to its information.

"I was happy about the positive acclimation our employees experienced with the self-service platform. We have a diverse group of employees from various cultural, and educational backgrounds, so introducing something new was a big deal. But, our employees love having access to update personal information, obtain paystubs, W2s and much more at their convenience."
